Before, During, and After (a crash event)

Motor vehicle safety begins with the driver. GM designs systems to help drivers avoid crashes. GM also designs systems to help protect people involved in crashes. And OnStar's Automatic Crash Response system is an example of a GM system designed to help people after a crash. Even with vehicle advanced systems and technologies, please remember to buckle up: everyone, on every trip. Restraint use is the law, because it saves lives.

Speaker: **Albert Ware**
Director of GM Vehicle Structure and Safety
Integration
General Motors Corp.

Albert Ware is Director of General Motor's Vehicle Safety and Crashworthiness Lab. He is responsible for managing a staff of 200 where testing, development and validation is conducted for all vehicles and systems necessary to meet and exceed federal motor vehicle safety standards and GM's internal safety standards.

Mr. Ware spent 17 years in suspension and chassis design and 11 years in other executive engineering leadership roles that included GM global math design strategies and vehicle quality improvement initiatives in product engineering and GM assembly plants.

Reservations required by

Noon Fri, Sep. 26

Bernard Santavy
